**Crop Formation: Witchurch Hants, U.K. 1995**

Laboratory Code: KS-03-24

Material: Wheat stems and heads, *Triticum aestivum*

Formation: Circular formations at Witchurch Hants on July 7, 1995.

Sampled: by Ms. Shelly Keel on July 7, 1995

SUMMARY OF RESEARCH FINDINGS:

a)- the Keel sampling diagram is presented in Fig.1 attached. The values listed in parenthesis give the percent change in apical node lengths relative to the mean level in the control nodes.

b)- mean node lengths in controls; 2.12 mm with 0.36 s.d. and N=61 plants.

c)- there are no significant differences between any of the formation samples and the controls.

COMMENTS

The variation in node lengths in samples taken within the formation are not statistically different than the variations within the individual control groups.
